vSet[®] Select

MAXIMIZE YOUR YIELD BY HAVING THE RIGHT GENETICS IN THE RIGHT ENVIRONMENT

YOUR SOILS AND YIELDS ACROSS THE FIELD ARE NOT THE SAME.

Yields vary dramatically across a field. Soil types, drainage, and elevation are some of the factors that cause different areas of the field to yield better than others.

PICKING ONE VARIETY OF SEED PER FIELD LIMITS YOUR YIELD OPPORTUNITY.

The number one thing you can do to manage variability in your field is to select the right seed. Seed company research shows as much as a 28 bushel difference when the right genetics are placed in the right environment. Historically, you have been limited to select the best seed on average for the whole field because your planter cannot switch seeds on the go to adjust for those soil or elevation changes. This limitation is costing you.

vSet Select GIVES YOU MORE OPTIONS.

Now you can take the planter you already own and give it the ability to automatically plant different seed in different areas across the field. vSet Select replaces the existing meter and drive system with two vSet meters controlled by two independent vDrive[®] electric motors. This gives you the ability to switch seeds row-by-row on the go, vary populations, and control row shutoffs.

FIELD LEVEL PERFECTION

Switch between seeds with no difference in the superior spacing and singulation you already have from vSet.

YOUR VIEW FROM 1,000 FEET

Can you imagine how you might position hybrids differently based on the differences in productivity within your fields? Take a look from above.

YOUR SOILS AREN'T THE SAME. NOW YOUR SEEDS DON'T HAVE TO BE.

Different soil types across your field get the seed that will perform best in each zone, not merely across the field as a whole.
